

Paragon Personal Hydrotherapy Systems

FILTRATION

We know you want your family's spa water to be clean and pure. That is why we built the best filtration/circulation system into every Paragon Spa. All Paragon Personal Hydrotherapy systems have 100 sq.ft/9.3 m², no by-pass Everflo™ filtration and circulation system to ensure sparkling pristine water. The first 50 sq.ft/4.65 m² filter is operated by our Hi - Flo™ circulation pump which runs silently 24 hours a day for just pennies and at far less cost than 2 speed systems that operate for a few hours each day. In fact, our circulation systems operate for about the cost of a 100-watt light bulb. The second 50 sq.ft/4.65 m² filter is operated by the 5 SPL/2.3 Kw pump(s) providing additional filtration on demand or additional filtration during your hydrotherapy session. During hydrotherapy sessions, when bather load increases, filtration is doubled. Each day the system purges itself at selected times and frequency you choose for added assurance of cleanliness and safety. Filters are easily accessible for cleaning and regular maintenance.

Take charge of your soak, or just "set and forget." Either way, Paragon's Power Touch Control technology is there to make your spa experience easy and enjoyable.

Our partnership with Gecko Electronics has yielded one of the most intuitive and reliable control systems available that constantly monitors water flow, pressure and temperature to ensure optimum health, safety and pleasure.

- Inverted display feature allows for easy use whether inside or outside the spa
- Large buttons and backlit display for easy reading
- Maintenance functions operate automatically to maximize sanitation and minimize energy costs
- Functions – jets, lights, blower – are timed for automatic shut-off
- Sensor failure and overheat detection
- Smart Winter Mode freeze protection
- Panel lock-out mode for children
