

Sunrise Spas

FILTRATION

At Sunrise, we take water hygiene very seriously. We've got the best equipment in place to do most of the work for you. A reduced maintenance routine, less chemistry, and more peace of mind about water chemistry all add up to one thing - more time for you to just relax and enjoy your spa. Sunrise Spas incorporates our proprietary Whitewater™ Filtration System. Whitewater provides a large skimming area to capture any surface oils or debris and a floating weir to keep them contained to the filter well. Enclosed in the Whitewater™ filter compartment are two twist and lock filters for easy removal and cleaning. The two 50 square feet no bypass filters are connected to the programmable dual speed pump providing a total filtering surface of 100 square feet. Continuously filtering to capture and contain any impurities in the water.
